

CHECKLIST

Mandatory Testing Requirements

for the Correct Functioning of Web Application

Smoke testing

Constantly execute basic functional tests during the whole development of web application.

Cross-browser testing

Verify your web application works smoothly across different browsers.

Sanity testing

Test if all minor changes function as expected after previous testing.

Exploratory testing

Thoroughly learn your product.

Re-testing

Fix the bugs, reproduce test cases in the identical environment, and re-test them solely.

UX/UI testing

Ensure the interface of your web app is attractive, user-friendly, and easy to navigate.
